

Bronto Skylift Stock Program

AERIAL PLATFORMS AVAILABLE ON SHORT NOTICE

Tired of too long delivery times?

The delivery times of the aerial work platforms, among other work machines, may in many cases be too slow for the dynamic access industry. Especially now that component shortages and other uncertainties are challenging manufacturers. Bronto Skylift launched a stock program back in 2018 to be able to provide equipment on short notice and this initiative has been warmly welcomed by customers.

Currently our stock program has models from 35 meter to 90 meter heights. If you are facing a worksite with short notice or otherwise need an aerial work platform for immediate or short-term delivery, we can help you.

Case story: Aerial work platform with one week's delivery time

Building an offshore windfarm on a tight schedule

A great example of the stock program's benefits was seen last year when a UK based Clerkin Elevation needed a 90-meter work platform on a very short notice. Reason behind it was a big project at Harland & Wolff, a company located in Belfast, Northern Ireland and specialized in heavy marine design and building. H&W had many big platforms from several access companies on a long-term rental period preparing offshore windfarm jacks, which were to be planted in the North Sea on a tight schedule.

Clerkin elevation, offering access solutions in Ireland and UK, placed the order for a 90-meter Bronto in the end of January. Some small modifications were done and an S90HLA was prepared for an immediate shipment from Finland. It was delivered straight to the work site and was working full time within a week from the order.

Clerkin and his crew were so convinced about the performance of the S90HLA that they bought another one shortly after.

"The S90HLA quickly became the favourite aerial work platforms on site among operators and customers alike due to the smooth operation, added reach at heights and reliability. This along with the short delivery times were the main reasons leading us to purchase a second one."

Joe Clerkin, Clerkin Elevation Ltd.

"We have seen more and more of this kind of short notice work sites popping up and it's great that we can now offer a solution for them."

Ian James, Key Account Manager, Bronto Skylift.

Safety above all

Bronto Skylift is a trusted global supplier of truck-mounted hydraulic platforms. We design, manufacture, sell and service appliances for rescue and firefighting, as well as for industrial access.

Our product range includes approximately 50 models with a range of 17 to 112 metres of working height. The advanced modularity also allows for numerous client-specific modifications. During the past 50 years, we have delivered over 7,000 platform units to fire brigades and industrial customers throughout all the continents in more than 120 countries.

Our headquarters and production plants are situated in Finland. We also have subsidiaries in Germany, Sweden, Switzerland and the US. The company is part of the Japan-based Morita Holdings Corporation.
